

SceneManager::createDynamic  
HeterogeneousObjectScene

SceneManager::createMolSolvent  
Scene

texReader::SetContext

```
graph LR; A[SceneManager::createDynamic HeterogeneousObjectScene] --> C[texReader::SetContext]; B[SceneManager::createMolSolvent Scene] --> C;
```

The diagram illustrates a dependency or call relationship. Two methods from the SceneManager class, 'createDynamic HeterogeneousObjectScene' and 'createMolSolvent Scene', are shown in white boxes on the left. Blue arrows point from each of these boxes to a gray box on the right labeled 'texReader::SetContext', indicating that both SceneManager methods invoke the SetContext method of the texReader object.
